collection.*

hidea™

Takes action with an ecofriendly collection.

BEING ECOlogic

It is a logic of changing attitudes towards a more sustainable life. At its base there are **3 fundamentals** to consider in any choice:

Reuse, to which we can contribute by avoiding the purchase of single-use products.

Recycling, where the principle is that the end of one product is the beginning of another and that each one of us can start this cycle.

Responsible consumption, which we can practice by avoiding the purchase of products made of harmful materials, of doubtful origin or in excessive quantities.

SUSTAINABLE BUSINESS

We assume quality as a key factor for the success of our strategy, encouraging a culture of continuous improvement at all levels.

We believe in a positive and inspiring work environment, based on Ethical principles, with respect for Human and Labor Rights, the Environment, and Occupational Health and Safety.

The sustainability culture is cemented by an integrated management system, incorporating its principles and values into its policies, strategies, processes, projects, and decisions.

SUSTAINABLE FOREST PRODUCTS

We include in this collection paper or cardboard products sourced from sustainable forests, contributing to the preservation of the environment.

We promote the incorporation materials with a lower environmental impact in its products, from the design stage, through recycled and recyclable materials with a long-life potential.

Materials

Simples choices, big changes.

Organic cotton

Cotton sourced from a sustainable crop, without chemicals or pesticides.

Recycled cotton

Recycling of discarded cotton, whether in weaving, manufacturing or even post-consumer use.

Jute

Jute is a vegetable textile fibre. It is 100% biodegradable and recyclable, and therefore environmentally friendly.

Juco

Mixture of jute (75%) and cotton (25%). The end result is a sustainable article from an ecological point of view, with a mesh soft enough to allow for comfort.

Wheatstraw fiber

The excess from the wheat grain harvest can be used to create resistant objects with much less plastic in their composition.

Natural straw fibre

Produced from a cotton substrate, which is transformed into long fibre. Similar to fabric, natural straw has great malleability, allowing folds and curves.

Bamboo fiber

Is made from bamboo pulp. Natural and biodegradable.

Stone Paper

Paper made from waste stone from industry, construction or quarries, and therefore does not require water or wood for its manufacture.

Paper from sustainable forest management

This type of paper comes from forests that are managed in a sustainable way, thus ensuring their correct use in paper manufacturing.

Recycled PET

Material made from the reuse of PET, the most used plastic in the creation of bottles and other containers.

Cork

Plant origin material from the bark of cork oaks, cork is highly resistant to moisture and therefore durable and environmentally friendly.

Recycled paper

Paper produced by reusing paper, thus reducing CO2 emissions and saving water and energy.

Recycled leather

Made out of used furniture, clothing or shoes, as well as the leather leftovers from other products.

Glass

It is the only material that is 100% recyclable and can be reused countless times. It is the most suitable for storing food and liquids because it does not contain chemicals in its composition.
